

battery tray...  
the acid because it is amphoteric (meaning it reacts with both acids and bases). Baking soda also works to put out small fires.

Here is one of the Optima Yellow Top batteries being placed on its side to see if this position makes for a better use of space. Another benefit in using a sealed battery is you don't have to worry about the acid leaking out and eating away at your sheetmetal, wires, or paint.

Our heater co  
the place. For
